

POWERSCALE ENTERPRISE ARCHITECTURE

High-Performance Scale-Out Storage Platform

Unifying file and object workloads with unprecedented scalability, AI data streaming, and zero-trust security.

PowerScale Next-Gen Cluster Benchmark

186 PB

Maximum raw capacity per
single cluster deployment

**12.5
TB/s**

Sustained read throughput
across NVMe nodes

100 GbE

Dual-port front-end
networking interfaces

< 1.5 ms

Ultra-low latency for
unstructured AI workloads

OneFS Distributed File System

Single volume namespace eliminates data silos and management overhead, allowing seamless scaling from terabytes to petabytes.

Multi-Cloud Integration

Direct high-speed interconnects with AWS, Azure, and Google Cloud for cloud bursting and automated tiering.

Architectural Pillars of PowerScale

Flexible All-Flash Nodes

Powered by NVMe media to accelerate demanding AI, machine learning, and deep learning analytics workloads with massive parallel processing.

Enterprise Cyber Resilience

Multi-layer security with SmartLock compliance, automated ransomware detection, air-gap isolation, and immutable snapshots.

SmartDedupe & Compression

Inline data reduction technology maximizing storage efficiency and reducing total cost of ownership by up to 33%.
